This chapter contains the following sections:

- [Purpose](#)
- [Intended Audience](#)

## 1.1 Purpose

This document provides guidelines for enabling existing MiCollab customers using AMC license bundles to transition to Edition 2 (SLS) license bundles.

In the AMC Licensed Server, license expiration is not a concern. However, administrators may want to assign licenses to users with a set expiry date. To support this, we have introduced the Subscribed Licensed Server (SLS) license system

## 1.2 Intended Audience

This guide is intended for MiCollab administrators.

# Introduction

2

This document outlines the process for MiCollab Server administrators to migrate roles and templates created with AMC license bundles to their equivalent Edition 2 (SLS) license bundles. A Python script will facilitate the efficient migration of UCC bundles to the corresponding Edition 2 license bundles.

**Result:** This migration will enable existing customers using UCC license bundles to transition seamlessly to Edition 2-based license bundles.

The table below provides an equivalency mapping between AMC License Bundles and Edition 2 ( SLS) license bundles.

AMC License Bundle	Edition 2 (SLS) License Bundle
UCC (V4.0) Entry	MiVB Entry (Ed. 2)
UCC (V4.0) Standard	MiVB Premier (Ed. 2)
UCC (V4.0) Premium	MiVB Elite CX (Ed. 2)

# Process flow for Licensing Synchronization

3

## 1. Synchronize Licenses

- Perform a licensing synchronization with the **Edition2 (SLS) server**.

## 2. Create Default Roles and Templates

- MiCollab will generate new **default roles and templates** based on the definitions in the **Edition2 (SLS) bundle**.

## 3. Transition Existing Users

- Users created with roles and templates from the **UCC bundle (AMC)** will be transitioned to their corresponding **Edition2 (SLS) equivalents**.

## 4. Update User Roles and Templates

- Replace references to the **UCC bundle (AMC)** in existing user roles and templates with their **Edition2 (SLS) equivalents**.

## 5. Revise Feature Profiles

- Adjust the feature profiles of users linked to the **UCC bundle (AMC)** to align with the **Edition2 (SLS) equivalents**.

## 6. Modify User License Bundles

- Update users' **User License Bundle** from the **UCC bundle (AMC)** to the corresponding **Edition2 (SLS) equivalent**.

## 7. Remove Legacy Roles and Templates

- Delete all default roles and templates that were originally created using the **UCC bundle (AMC)**.

## 8. Ensure No Remaining References

- Verify that no roles or templates from the **UCC bundle (AMC)** remain in MiCollab.

# Prerequisites for Migration

4

Before executing this script, ensure the following:

- Prior to migrating to the Edition2 (SLS) license, it is critical to run the backup script ([Backup Script](#)).
- After completing the upgrade to the Edition2 license, the migration script ([Migration Script](#)) will be executed to transfer all existing UCC user(s) to their respective Edition2 licenses.
- Before running the migration script, please ensure the following steps are completed:
  - **Backup Preparation:** This migration process is irreversible. Therefore, before proceeding, it is essential to create a comprehensive backup or snapshot of both the MiCollab and MiVB systems.
  - **System Synchronization:** Verify that MiCollab and MiVB are fully synchronized.
    - **Reconciliation Check:** Confirm that the reconciliation wizard does not display the message "*No reconcile required.*" (Once MiCollab and MiVB are synchronized, the "Reconcile Required" page will no longer appear.)

# Execution steps

5

- 1. Download Scripts:** Download the [backup script](#) and the [migration script](#) to your local machine.
- 2. Extract and Copy:** Extract the downloaded files using 7-Zip and move the scripts to `/usr/mas/bin`.
- 3. Permission for execution:** To grant permission to execute, run the following commands:

- `chmod -R 755 /usr/mas/bin/ucc_bundle_migration_to_edition2.py`
- `chmod -R 755 /usr/mas/bin/ucc_bundle_backup_before_edition2_upgrade_v1.py`

- 4. Run Backup Script:** Execute the backup script to back up UCC user bundle data:

```
python /usr/mas/bin/ucc_bundle_backup_before_edition2_upgrade_v1.py
```

The backup will be saved in `/tmp/user_ucc_bundle_backup.txt`.

**i Note:** Ensure a complete backup of UCC user bundle data is taken before Edition2 License migration. Verify the contents of `/tmp/user_ucc_bundle_backup.txt` after executing the backup script.

- 5. Upgrade to Edition2:** Proceed with the Edition2 license migration on MiCollab.
- 6. Run Migration Script:** After the upgrade, execute the migration script to transfer UCC users to their Edition2 licenses:

```
python /usr/mas/bin/ucc_bundle_migration_to_edition2.py
```

**i Note:** After running the migration script, the backup file `/tmp/user_ucc_bundle_backup.txt` will be deleted.

# Limitations

# 6

- The script will update all existing user roles (Entry, Standard, and Premium) for only **UCC V4** pointing to AMC, mapping them to their equivalent SLS roles.
- The script can only delete AMC-generated default templates from MiCollab after Edition 2 (SLS) UCC licenses.
- After upgrading the Edition 2 (SLS) UCC license bundles on the server, the script will delete the following AMC default roles/templates from the MiCollab system:
  - UCC (V4.0) Entry
  - UCC (V4.0) Standard
  - UCC (V4.0) Premium
- The script will exclusively handle **UCC V4** roles and templates.
- The script will not modify or delete the AMC Basic Template.

# Transition of Feature Profile during Migration to Edition 2

7

This chapter contains the following sections:

- [Overview](#)
- [Key Considerations](#)

## 7.1 Overview

When a site migrates from the **UCC bundle** to the **Edition 2 bundle**, the MiCollab feature profile is updated to align with the corresponding Edition 2 bundle. This ensures that users receive the appropriate feature set based on their new bundle in the updated system.

### Example Scenario

Consider a scenario with two users before and after migration:

User	Before Migration (AMC - UCC Bundle)	After Migration (SLS - Edition 2 Bundle)
User 1	<b>User Bundle:</b> UCC 4.0 Standard <b>Feature Profile:</b> UCC (V4.0) Premium	<b>User Bundle:</b> MiVB Entry (Ed. 2) <b>Feature Profile:</b> MiVB Premier (Ed. 2)
User 2	<b>User Bundle:</b> UCC 4.0 Standard <b>Feature Profile:</b> UCC 4.0 Standard	<b>User Bundle:</b> MiVB Entry (Ed. 2) <b>Feature Profile:</b> MiVB Entry (Ed. 2)

## 7.2 Key Considerations

- The user bundle and feature profile assignments are updated based on the **Edition 2** structure.
- The feature profile mapping varies for each user depending on their original bundle and entitlements.
- As shown in the example, User 1's feature profile changes to a higher-tier profile (MiVB Premier), while User 2 retains a standard profile (MiVB Entry).

**Note:** This transition ensures that users maintain functionality in alignment with the new licensing model.
