## Language file for DBC 43x and DBC 44x

# [ 1 Introduction

### 1.1 Abstract

The aim of this document is to describe the format of the language file containing language dependant texts and characters that are used for the DBC 43x 01 and DBC 44x 01.

Note that some texts may be sent from the PBX.

This document is intended for system administrators that want to change text strings shown in the telephone display, but also for translators making localization of files.

### 1.2 References

Some parameters concerning language settings need to be set in the configuration file, see description for CONFIGURATION FILE FOR DBC 43x and DBC 44x.

### 1.3 Acronyms and Abbreviations

The following acronyms and abbreviations are used in the text:

DHCP - Dynamic Host Configuration Protocol

DNS - Domain Name System

GK - GateKeeper

HTTP - Hyper Text Transfer Protocol

LAN - Local Area Network

Reg. - Regular (Not Italic or Bold text)

## Language file for DBC 446, 43x

## 2 Description

The string table in the tab *2.B Description* contains the following columns:

<i>column name</i>	<i>definition</i>
<b>string type</b>	see section 2.1 File Syntax
<b>string ID</b>	The identity of the text string (used for localization)
<b>default value</b>	The English text
<b>use</b>	Describes in which context the text is used
<b>pixel check</b>	The text string must be checked according to the maximum pixel length. Can have the values for DBC 43x, DBC444 and DBC446.
<b>language file</b>	States in which language file the text string shall be included. Values can be DBC 43x, DBC444, DBC446, or two of them or all.
<b>display rows</b>	States the maximum rows in which the text string can be displayed
<b>font size</b>	The size of the text. Reg. = Regular, Cond. = Condensed.
<b>max. length</b>	The recommended maximum length in number of characters that the translated text can have. The number of characters is dependant on how many pixels a character consists of.
<b>max. pixel length</b>	The maximum length in number of pixels that the translated text can have. If the text string can be displayed in mutiple rows, it is the maximum length in number of pixels that the translated text can have in each row.
<b>not to be translated</b>	The text string is not localized by Mitel CoE MX-ONE, but can be translated and added in the language file by the system administrator

### 2.1 File syntax

The file contains all languages supported by the DBC 43x 01 and DBC 44x 01.

The file should be stored in the directory defined in the Config file, usually /dbc43x 01 or /dbc44x 01 directory of the HTTP server.

There is one language file for each of the following types of phones, DBC43x, DBC444 and DBC446.

The file should be saved in 16 bit UNICODE file format, this can be done in Microsoft Word.

The file consists of the following string types and the syntax should be as follows:

```
[LANGUAGE]
[LANGUAGE_NAMES]
[MONTH_NAMES]
[WEEK_DAYS]
[TIME_NAMES]
[MENU_TEXTS]
```

[MAIN\_TEXTS]  
 [WEBB\_TEXTS]  
 [INPUT\_LANGUAGE]  
 [UPPER\_CASE]  
 [LOWER\_CASE]  
 [END]

## 2.2 Change of a text string shown in the display

Sometimes there is a need to change a text string shown in the display in the telephone.

An example is when the used word for an absence reason, in the My Presence menu, shall be adapted to what is used in the PBX.

The system administrator can change the text string in the following way:

1. Use Microsoft Word to edit the language file.
  2. Find the word to edit. If it is an absence reason word, word T155-T168/T155b-T168b/T155c-T168c
  3. Edit the word in the specific language that shall be changed.
  4. Store the edited language file on the software server.
- Use a different revision in the file name; if the original file was called d44x01-lang\_R1A.txt call the edited file d44x01-lang\_R1A1.txt
5. Change the revision of the language file in the configuration file.
  6. Reboot the telephone, either by command from the gatekeeper or manually.

*Note!* No text string can be removed or added. The only modification that is working is to change an existing text string.

### 2.2.1 Forced wrap around to the next line

It is possible to force a wrap around to the next line by writing \n in the text string in the language file.

Example: Your connection to \nthe world. Will be shown in the display as:

#### **Your connection to the world**

It is also possible to conditionally force a word wrap around, after hyphen, by writing \- in the word in the language file. This can be useful for shortcut keys.

The word is written on one line without a hyphen if there is room enough on one line.

The word is written on two lines with a hyphen if:

1. the definition for the text string allows that the text string can be on two rows, see section 2.B below where the column **display rows** shows if the text string can be wrapped to two lines
2. if there is not space enough on one line

Example: The text string with string id T360b *Free on busy*. The translated Swedish text string *Ledig an\ -nan linje*, will be shown in the shortcut key label in the display e

**Ledig an-  
nan linje**

In the menu **Availability** the same string will be shown as:

**Ledig annan linje:**

because there is space enough on one line.

### 2.3 [LANGUAGE]

Language data such as two letter abbreviation for the available languages, revision, date and document number.

### 2.4 [LANGUAGE NAMES]

Names of the available languages.

### 2.5 [MONTH NAMES]

Three letter abbreviation of months.

### 2.6 [WEEK DAYS]

Two letter abbreviation of week days starting from Sunday.

### 2.7 [TIME NAMES]

One letter abbreviation of time names: Year, Month, Day, Hour and Minute.

### 2.8 [MENU TEXTS]

Menu texts or soft-key text strings is the texts above the soft-keys and in the top menu bar.  
The text is automatically centred over each soft-key by the application.

### 2.9 [MAIN TEXTS]

This section describes the words that can be up to 40 characters wide.

*Note!* If the same string appears in both DBC 44x and DBC 43x, they have unique entries in the table.

#### **2.10 [WEBB TEXTS]**

Text strings used by WEB browser at an authentication dialog with an internet server.

#### **2.11 [INPUT LANGUAGE]**

The input language specifies the names of the alternative keypad character set used for entering e.g. names in the contacts.

#### **2.12 [UPPER\_CASE]**

Upper case keypad characters for the different input languages.

#### **2.13 [LOWER\_CASE]**

Lower case keypad characters for the different input languages.

#### **2.14 [END]**
