Unified Voice Messaging and Enterprise® Messaging

Administrator Quick Reference Guide

This guide provides information for frequently used voice mail administration features. For more information about these and other features, refer to the main *Unified Voice Messaging and Enterprise Messaging Administrator Guide*.

Voice Mail Administrator Features

You can use the voice mail administrator mailbox to program the following voice mail features.

Accessing the Voice Mail Administrator Mailbox

1. Dial the voice mail access number.
2. Press ***** or say "Login" to identify yourself as a subscriber.
3. Enter or say the administrator mailbox number.
4. Enter the passcode, and then press **#**.
5. Press **9** or say "Nine" to access the administrator menu.

Recording Broadcast Messages

1. Access the administrator mailbox as described above.
2. Press **1** or say "Broadcast Message" to select broadcast message.
3. Record the message, and then press **#** to stop recording.
4. Press **#** or say "Accept" to accept the message.

Performing Subscriber Mailbox

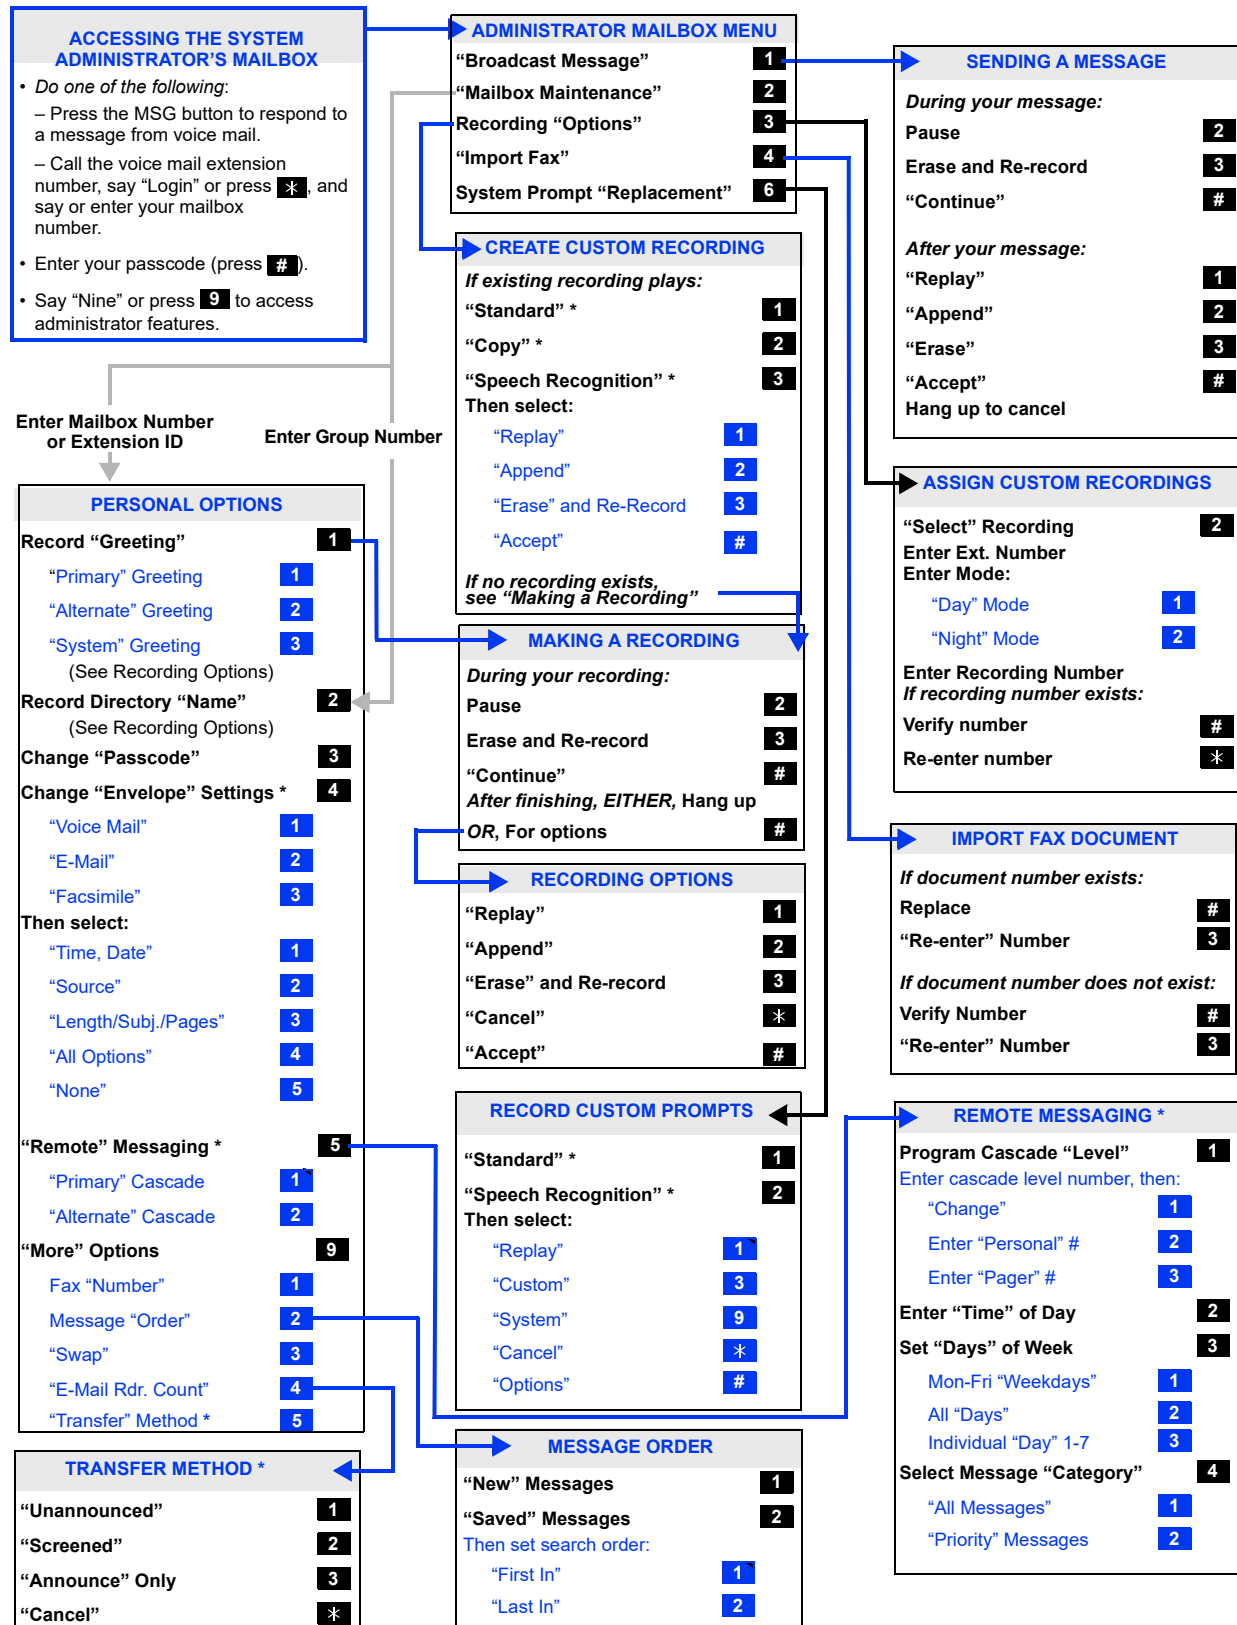

Maintenance

1. Access the administrator mailbox as described to the left.
2. Press **2** or say "Mailbox Maintenance."
3. Enter or say the mailbox, extension ID, or group list number, and then follow the prompts.

Importing Fax Documents

1. Use a fax machine to obtain dial tone, and then access the voice mail administrator mailbox as described to the left.
 2. Press **4** or say "Import Fax."
 3. Enter the fax document number, and then do one of the following:
 - If the document number does not currently exist, press **#** or say "Yes" if the number is correct, or press **3** or say "Re-enter" and re-enter the number.
 - If the document currently exists, press **#** or say "Yes" to replace the document, or press **3** or say "Re-enter" to enter another number.
 4. When prompted, press **Start** on the fax machine.
-

At any menu level, press * or say "Cancel" to cancel or return to the previous menu or press # or say "Accept" to accept. Also, ASR commands are indicated in the quotation marks.

CHAPTER 1

NEW FEATURES

Introduction

This chapter lists new features related to the MiVoice Office 250 voice mail administration.

System Documentation Resources

MiVoice Office 250 documentation includes the following resources:

- *Mitel MiVoice Office 250 Features and Programming Guide*
- *MiVoice Office 250 Installation Manual*
- Mitel MiVoice Office 250 DB Programming Help
- *Mitel MiVoice Office 250 Phone Administrator Guide*
- *Mitel MiVoice Office 250 Unified Voice Messaging Administrator Guide*
- *MiVoice Office 250 System Administration & Diagnostics Guide*,
- Mitel System Administration & Diagnostics Help

For additional system documentation, refer to the “Documentation” folder of the system software DVD. You can also find all documentation on the [Mitel eDocs Web site](http://edocs.mitel.com) (<http://edocs.mitel.com>).

Important Introductions and Discontinuations

The CS platform is no longer supported in Release 6.2.

NOTE CS controller hardware migration bundles are described in bulletins.

MiVoice Office 250 v6.3 SP2 New Features

This section briefly describes the new features, hardware, and enhancements available on the MiVoice Office 250 when equipped with the 6.3 SP2 software release.

Improved functionality for SIP Phones, especially 6900 SIP Phones

- Intercom can be dialed using the keypad of the 6900 SIP phone (this improvement needs MiVoice Office Application Suite Release 5.1 SP2 or later).
- The default value of SIP devices for **Audio for Calls Camped onto this Device** is set to **Ringback** instead of **MOH (Music on Hold)**. When MOH is not installed, the user on-hold does not hear anything. Upgrading an existing system implements this new default setting.
- When adding off-node devices to Hunt Groups or Ring in Destinations, the device type IP/Digital is renamed as IP/Digital/SIP/6900 to make it evident that this needs to be selected only for 6900 SIP Phones.
- The default values for device type 6900 SIP phone are also suitable for the Phone Manager clients. It is now renamed as 6900/Phone Manager SIP phone.

Security Updates

- MiVoice Office 250 is now GDPR compliant.
- MiVO 250 offers TLS 1.2 on all secured system connections. The System Administration (Sys Ad) and the Database Programming (DBP) applications connect with TLS 1.2 to MiVO 250.
- The default value of OAI/WEB/ SIP ports are set to disabled. It is recommended to set this value to enabled before the ports are used. Upgrading an existing system implements this new default setting.

Support of Mitel 5613/5614 SIP Phones

The Mitel 5613/5614 SIP Phones are supported on MiVoice Office 250 with the same functionality as the previous models of Mitel 5603/5604.

MiVoice Office 250 v6.3 SP1 New Features

This section briefly describes the new features, hardware, and enhancements available on the MiVoice Office 250 when equipped with the 6.3 SP1 software release.

Improved OAI functionality to assist with 6900 SIP Phone Deployment

Single Provisioning: When a 6900 phone is created in MiVO250, it automatically generates authentication details. Using encryption, MiVO AppSuite can import the 6900 device authentication details. When configuration changes are made to 6900 SIP Phone Group(s) the MiVO250 will notify MiVO AppSuite via OAI.

Page zone numbers: With improved OAI functionality 6900 phones can now select a Page Zone ID in Keymap profiles on MiVO AppSuite.

NOTE If CT Gateway is in use, this will need to be upgraded to 5.0.63.0 to allow the new OAI functionality to be used.

Other Updates

AWP shows the 69xx SIP phone as separate device type in the Device General tab.

Security Updates

- New OpenSSL version 1.0.2n.
- **Meltdown/Spectre:** The new Bios on PS-1 Dell R230 servers is supported.
- GDPR documents are available as part of the Release 6.3 SP1 documentation.
- Inbound Authentication is now available for SIP Voicemail.
When creating a SIP Voicemail, it is recommended to populate Inbound Authentication credentials to avoid any unauthorized access to MiVO250.

MiVoice Office 250 v6.3 New Features

This section briefly describes the new features, hardware, and enhancements available on the MiVoice Office 250 when equipped with the 6.3 software release.

CloudLink with MiVoice Office 250

The CloudLink Gateway can be connected to the MiVoice Office 250 with SIP trunks. It allows MiVoice Office 250 Users (with DEE) to include their Mobile Device on which the **OfficeLink** App is installed. The **OfficeLink** App supports system features. For more description on **OfficeLink**, and how to configure **CloudLink** in MiVoice Office 250 DBP, see <http://mitel.help>.

No licenses are needed. The MiVoice Office 250 Release 6.3 detects CloudLink as a Trusted Application and automatically releases the needed OAI and SIP trunk licenses. The Trunk group configuration for CloudLink is supported with a new template for CloudLink.

Support of 6900 SIP phones with MiVO Application Suite 5.1

Mitel 6920, 6930 and 6940 SIP Phones are supported in conjunction with MiVO AppSuite 5.1.

The 6900 SIP phone configuration is supported with a new 6900 SIP phone type, that can be used instead of the generic SIP phone type.

The MiVoice Office 250 Rel 6.3 supports additional SIP extension and trunk features, handset flags and security improvements.

Administration Features, when using SIP devices

The MiVoice Office 250 R6.3 allows SIP devices to have Administrator and Door Relay rights. Clients on Application Suite 5.1 have special keys defined to activate: Door Relay, Night Ring on/off, Clear System Alarm, Diagnostics on/off, System History Freeze/Unfreeze, and Automatic Diagnostics on/off.

Divert/Accept UCD Calls, when using SIP devices

SIP devices support the Hunt Group Remove/Replace feature. So, the incoming hunt group calls to SIP phones can be stopped with the DBP flag, or by using the feature code (322 HG Remove, 323 HG Replace, 324 Toggle HG Remove/Replace).

SIP Reverse Transfer

Calls on hold or calls ringing on another phone or hunt group can be picked up by a SIP device.

Direct Page

Direct Page is an enhancement to the existing **Page** feature, which allows you to page to the loudspeaker of an individual IP/ Digital Phone instead of a whole Paging Zone.

- To configure an IP/ Digital Phone as a destination for Direct Page the phone must be assigned to a Paging Zone, which has the **Use zone for Direct Page** option enabled. This is disabled by default.
- A Direct Page is then activated by dialing **7** (Default Feature Code for Paging), followed by the configured **Paging Zone**, and then the extension number of the phone you want to Direct Page.
- Direct Page can only be activated by Phones that have the **Initiate Direct Page** flag set to **Yes**.
- Analog and SIP phones cannot receive a **Direct Page**, but can initiate a Direct Page to an IP/ Digital Phone.

Flexible SIP Header Configuration to SIP Trunk Provider

There are new fields available in the SIP Trunk Group configuration that allows to define which Caller ID information is sent to the SIP provider.

Restricted CLI in SIP Header

The caller identification can be withheld within the SIP header.

Display only Caller Identification instead of Transfer Information

A new Phone flag allows you to suppress transfer information and instead display caller identification and name when the incoming call is ringing.

Alternate Lamp Indication on Phone/ PKM Keys

Previously, MiVoice Office 250 lamp indication used three flashing rhythms (ringing: quick, hold from yourself: moderate, everything else: slow). A new system flag **Use alternate key lamp indication for Phone status** allows a clearer difference (ringing: slow, hold from anyone: moderate, active calls: continuously lit).

Release Key

Actual desktop phones on MiVoice Office 250 do not have the old “infinity key” to release a call with a simple keyclick. For example, a receptionist with a headset still had to use the hook in the cradle of the desktop phone to release calls. Now it is possible to configure the **release call functionality** on any phone key. The configuration can also be defined by the user in the User Web Portal (UWP).

Notification of no Primary or Local Attendant Configured

The Primary or local Attendant is important to system behavior. When a user unintentionally removes these from the Database configuration, a warning message appears.

SSL Certificate

You can generate **Certificate Signing Request** and **Upload SSL Certificate** settings to create a CSR request and upload customer's own certificate on the system.

Security Updates

- New OpenSSL version 1.0.2l
- Improvements have been made to the existing Firewall, including the ability to save and restore settings. Firewall configuration options have been extended to include the PS-1 when equipped with the MiVoice Office 250 6.3 software release.

Discontinuation of UCX (Unified Communicator Express)

Unified Communicator Express was discontinued in May 2015. It is now removed from MiVoice Office 250 R6.3 documentation.

MiVoice Office 250 v6.2 SP2 New Features

This section briefly describes the new features, hardware, and enhancements available on the MiVoice Office 250 when equipped with the v6.2 SP2 software release.

UVM Diagnostic Improvements

The UVM diagnostic improvements supports changing logging level for the UVM application to help diagnose customer-affecting issues. The logging level for the UVM application can be only debug or info. The Debug logging level provides logs with the most information. This includes information that is useful for debugging configuration and hardware integration errors. The Info logging level includes information about changes in application state values and major application events. It is available in SysAd and in the AWP.

NOTE

The debug logging level for UVM is only to be used for specific debugging activity. It is not recommended to enable debug logging level without prior consultation with Mitel Product Support. Alarm A150 'Extended APP Logging is Enabled' will appear until all applications are turned off debug logging level again. The Alarm 150 will not appear on administrator telephones, it will only appear within System Administration and Diagnostics, and Message Print.

Dirty COW Security Updates

Dirty COW (Dirty copy-on-write) is a computer security vulnerability for the Linux kernel that affects all Linux-based operating systems. It is a local privilege escalation bug that exploits a race condition in the implementation of the copy-on-write mechanism in the kernel's memory-management subsystem.

The MiVoice Office 250 v6.2 SP2 has included a series of fixes to prevent the Dirty COW vulnerabilities from affecting the system.

New PS1 Hardware Server

The R230 Server supports the MiVoice Office 250 PS1 software, and it is capable of running the 32-bit Debian 4.0 based distribution with the MiVoice Office 250 components.

Other Enhancements

- The MiVoice Office 250 Release 6.2 SP2 uses OpenSSH 7.1p1 and OpenSSL 1.0.2j.
- The MiVoice Office 250 Release 6.2 SP2 supports Dell R230 as PS-1

MiVoice Office 250 v6.2 SP1 New Features

This section briefly describes the new features, hardware, and enhancements available on the MiVoice Office 250 when equipped with the v6.2 SP1 software release.

System Diagnostic Improvements

This feature supports “extended CP logging” to help diagnose customer-affecting issues, and new “archive options” for preserving various logs and statistics from the system. They are available in SysAdmin and in the Admin Web Portal (AWP).

Note: The Extended CP Logging capability is only to be used for specific debugging activity. It is not recommended to enable these logs without prior consultation with Mitel Product Support. Alarm A150 ‘Extended CP Logging is Enabled’ will appear until all Extended CP Logging options are disabled again.

Watchdog Improvement

The watchdog monitors activity of call processing. If call processing does not respond to the watchdog every 30 seconds, it will restart the MiVoice Office 250 system. New Logs are in the cp_watchdog_observer_log.txt file available in SysAdmin and Admin Web Portal (AWP).

T1/E1 Refresh

The FPGA component on the Dual T1/E1 card had to be replaced. The new card version is backward compatible to previous releases. Release 6.2 SP1 now also contains the firmware upgrade mechanism.

MiVoice Office 250 v6.2 New Features

This section briefly describes the new features, hardware, and enhancements available on the MiVoice Office 250 when equipped with the v6.2 software release.

System Park

System Park is a feature that allows calls to be parked by a phone, then either retrieved again by that phone, or retrieved by another phone.

- The Park/Pickup key with the same destination may be configured on several phones.
 - then any of these phones can park or retrieve calls from the same destination.
- Multiple calls may be parked on the same destination.
 - If in a call, the call will be added to the queue of parked calls.
 - If not in a call, the first parked call on this destination will be retrieved.
- Parked calls will recall the person who parked the call after a timeout
 - Phantom destinations use the new Park Recall Timer (default 180s, range 30-600s)
 - Hunt Groups use the existing Hunt Group Recall Timer (default 180s, range 1-65'535s)
- If a call is parked on a Park/Pickup key, the key will flash.
 - except if the Hunt Group has the 'Group Call Pick-up' flag disabled.
- Additional Notes:
 - Phones without a Park/Pickup key can use the features 'transfer' and 'reverse transfer' to park and retrieve calls from destinations like "Park Location 1". Therefore it is recommended to give simple numbers to such Phantom or Hunt Group destinations.
 - Assigning a Park/Pickup key to a Hunt Group destination is an enhancement to the existing Group Pick-up feature, allowing Group Pick-up using a single key press, whilst also allowing for a visual indication.

Import Audio Files for Audiotex Recording Enhancement

Audiotex Recordings are custom recordings used by the MiVoice Office 250 Unified Voice Messaging (UVM) applications like the Auto Attendant (AA) and Call Routing Announcement (CRA) features.

Until now, Audiotex recordings could only be recorded using a phone with access to the Voice Mail System Administrator's Mailbox. Each recording is associated with a recording number and assigned to the application(s) in Database Programming.

From release 6.2, you can now import audio files and use them for Audiotex applications, including Auto Attendant (AA) and Call Routing Announcement (CRA) features. This will improve the quality and fidelity of the recordings and allow pre-recorded, professional recordings for auto attendant greetings and announcements.

Recording requirements are as follows:

- At this time, only WAV files are supported.
- Recordings must be less than 5 minutes in length.

MiVoice 5624 Wireless Phone Support

The MiVoice 5624 Wireless Phone seamlessly blends the wireless needs of the user with a wide range of critical applications like voice messaging and integrates with fixed legacy applications within the organization.

The MiVoice 5624 Wireless Phone is Mitel's first VoWiFi (Voice over Wi-Fi) handset operating on 802.11n network; it supports the deployment of voice over a Wireless LAN (WLAN) without degrading the performance of an existing .11n network capacity. A MiVoice 5624 Wireless Phone-based solution delivers trouble-free WLAN vendor interoperability and scalability, as well as the capacity to integrate and communicate with a comprehensive range of external sources.

Notes:

- MiVoice 5624 Wireless Phone is already available outside North America.
- In North America the regulatory approval and introduction is in progress with MiVoice Business and will then also be available for MiVoice Office 250
- MiVoice 5624 Wireless Phone is Mitel's rebranding of the earlier certified Ascom i62 and is technically the same. (Mitel SIP Center of Excellence specifications, 14-4940-00310).

Discontinuation of support for CS platform

With Release 6.2, CS platform is not supported.

Other Enhancements

- Security improvements for SSL connections (Webserver, SSH) used on the system.
 - Open SSH 7.1
 - OpenSSL 1.0.2a
 - Web services are only accessible via TLS 1.2 encryption

More Features in Release 6.2

MOH (Music on Hold) for parked destinations

To change from Ringback to MOH for Parked Calls, two configurations are needed:

1. Change the 'Audio for Calls Ringing at this Device', from Ringback to Music, at the Park Phantom(s)

2. Change the 'Audio for Transfer to Ring' from 'Ringback', to 'Use Next Device's Audio Source', at the Trunk Group."

Group Pickup Enhancement

Assigning a Park/Pickup key to a Hunt Group destination is an enhancement to the existing Group Pick-up feature, allowing Group Pick-up using a single key press, whilst also allowing for a visual indication.

Other Enhancements

MiVoice Office 250 Release 6.2 supports Exchange 2016

CHAPTER 2

OVERVIEW

Introduction

This guide provides instructions for using your administrator mailbox to perform voice mail administration. For quick access to frequently used feature instructions, you can use the removable Quick Reference Guide included with this guide.

You must have access to an administrator mailbox, a voice mailbox designated to access and program features described in this guide. The system administrator assigns the administrator voice mailbox in the Mitel 5000 Communications Platform (CP) Database (DB) Programming application. See “[Administrator Types](#)” below.

Administrator Types

The following administrator types are referenced in this guide:

- **Phone administrator:** Uses a designated administrator phone to perform various administrative functions such as changing system modes, managing alarms, and programming basic phone administration. For administrator phone instructions, refer to the *MiVoice Office 250 Phone Administrator Guide*, part number 580.8001.
- **Voice Mail administrator** (the audience for this guide): Uses the administrator voice mailbox to perform end-user level voice mail administration. This guide applies only to the Unified Voice Messaging (UVM) and Enterprise Messaging (EM) products. If using the NuPoint Unified Messaging (UM) product, go to the [Mitel Online Web site](http://www.edocs.mitel.com) (<http://www.edocs.mitel.com>) for NuPoint UM administrator documentation. Refer to the *Web Console Help* and the *System Administration Help*.
- **System administrator:** Uses the MiVoice Office 250 DB Programming application to configure all phone system and voice mail features for your organization. Your system administrator may be on site, or you may rely on your local Mitel provider (the company that installed your phone system and now services it) for system administration. All sales, service, and technical support are handled at the local level by your authorized Mitel provider. If you do not know the contact information for your local provider, use the “Partners – Mitel Partner Locator” link at the top of the [Mitel Web site](http://www.mitel.com) (www.mitel.com) to locate a nearby office.
- **Network administrator:** Maintains the network and performs network-related tasks.

Additional References

Refer to the following references for additional information.

Feature References

The administrator mailbox functions as both a standard system mailbox and an administrator mailbox. However, because this guide describes features that are programmed from the administrator mailbox only, refer to the appropriate voice mail user guide for detailed feature descriptions and end-user instructions.

Previous Software and Hardware Versions

This guide provides instructions for MiVoice Office 250 v6.1 software. You may find that some features referenced in this guide do not apply to your system. For more information, refer to the hardware or software manuals for your product or software version. Contact your local authorized Mitel provider (the company that installed your phone system and now services it) for more information. If you do not have the contact information for your local provider, use the “Partners – Mitel Partner Locator” link at the top of the [Mitel Web site](http://www.mitel.com) (www.mitel.com) to locate a nearby office.

System Networks and Nodes

Two or more MiVoice Office 250 systems can be connected to form a network, providing a seamless interface between the systems. For example, a MiVoice Office 250 system in Phoenix, Arizona can be connected to another MiVoice Office 250 system in Tampa, Florida. System users can place calls across the network to other extensions as if they were in the same building. However, each system can have its own time settings, call configurations, System Speed-Dial contacts, and so on.

In this guide, all references to a *network* mean two or more connected systems. Each system in a network is called a node.

Multicultural English References

This guide is intended for audiences in the United States (U.S.) and in the European market, which includes the United Kingdom (U.K.). Because of this dual support, dual references are made to industry features, standards, and jargon, as appropriate throughout the document. For the purposes of this administrator guide, British English terms are assumed to apply to other English-speaking European cultures, as well.

For example, the U.S. telecom industry refers to an audio communication line between a public switching system and a private switching system as a “central office (CO) trunk”. In the U.K., this same type of line is called a “local exchange trunk”.

This guide does not make a distinction between American English and British English spellings of common words. Only American English spellings appear in this manual. For example, the word “analog” is not spelled as “analogue”.

CHAPTER 3

VOICE MAIL ADMINISTRATION

Voice Mail Administration

Voice mail is an integrated component of the Mitel® 5000 Communications Platform (CP). This guide provides administrator instructions for features that are provided in the Unified Voice Messaging (UVM) voice mail system.

Because various voice mail products work with the MiVoice Office 250, this guide does not include voice mail subscriber (user) feature instructions. Refer to the appropriate voice mail user guide for your system for feature descriptions and instructions:

- *Unified Voice Messaging and Embedded Voice Mail Card User Guide*, part number 835.3205
- *NuPoint Unified Messaging User Guide*

Voice Mail Systems

The MiVoice Office 250 supports the following voice mail systems:

- **Unified Voice Messaging:** UVM is the built-in voice processing system that provides voice mail and voice messaging for system users. UVM also provides unified messaging capabilities so subscribers can listen to their voice mail messages through their e-mail client. UVM does not support Fax-On-Demand or buffered SMDR. If they are part of a network, mailboxes on a MiVoice Office 250 node equipped only with UVM cannot forward messages to, or receive messages forwarded from, mailboxes on other nodes.
- **NuPoint Unified Messaging (UM):** NuPoint UM is an external voice mail system that provides voice and fax messaging capabilities, paging support, and personal mailboxes. NuPoint UM also provides unified messaging capabilities so subscribers can listen to their voice mail messages through their e-mail client and their voice mails through the Telephone User Interface (TUI). For NuPoint UM documentation, go to the [Mitel Online Web site](http://www.edocs.mitel.com) (<http://www.edocs.mitel.com>). For NuPoint UM administration, refer to the *Web Console Help* and the *Technical Documentation Online Help*.

You can also contact your system administrator or local provider for more information about your voice mail system.

Administrator Features

The system administrator (the person who programmed your system) assigns voice mail administrator mailboxes. The administrator mailbox has all of the voice mail subscriber mailbox features, plus the ability to do the following:

- Record broadcast messages. See “Recording a Broadcast Message” on page 32.
- Perform group list maintenance. See “Recording a Group List Name” on page 32.
- Customize or reinstate voice mail prompts. See “Recording Custom System Voice Mail Prompts” on page 33.

- Create and select custom audiotex recordings. See “Creating Audiotex Recordings” on page 34.
- Configure settings to import fax documents. See “Fax Import Feature” on page 38.

Automatic Speech Recognition (ASR)

You can use ASR to issue voice commands instead of pressing dial pad buttons for voice mail options.

Note: This feature may or may not be enabled for your system.

ASR commands are included in the feature instructions. When using ASR, follow these guidelines for best results:

- Use the handset for voice commands. External microphones pick up background noise, which may cause misinterpreted voice commands.
- Do not say “Pound” to activate features when using ASR. The silence that follows your voice command functions as the # button.
- Use the dial pad buttons to select menu options when recording messages. Because ASR is automatically disabled, recorded messages include any attempted voice commands.
- ASR is also disabled when entering voice mail passcodes—this is to prevent the passcode from being heard by others.

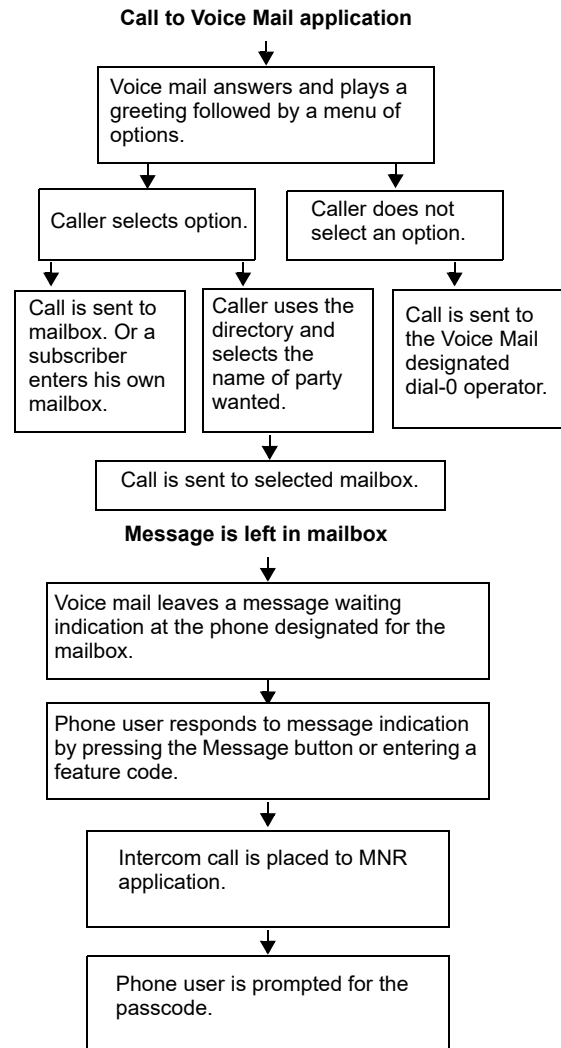

Note: If the system fails to understand an ASR command three times in a row, the system informs you that it is switching to DTMF mode, meaning you must use the dial pad buttons to select or enter menu options.

Voice Mail and Message Notification/Retrieval Applications

Two features combine to provide the voice mail system: the Voice Mail application and the Message Notification/Retrieval (MNR) application.

- **Voice Mail:** Handles all calls that are directed to Voice Mail placed by subscribers and nonsubscribers. Callers hear the main company greeting, followed by a menu of available options. Phones can forward or transfer calls directly to their mailbox using the application extension number. The Voice Mail application can also be the message center for subscribers' phones.

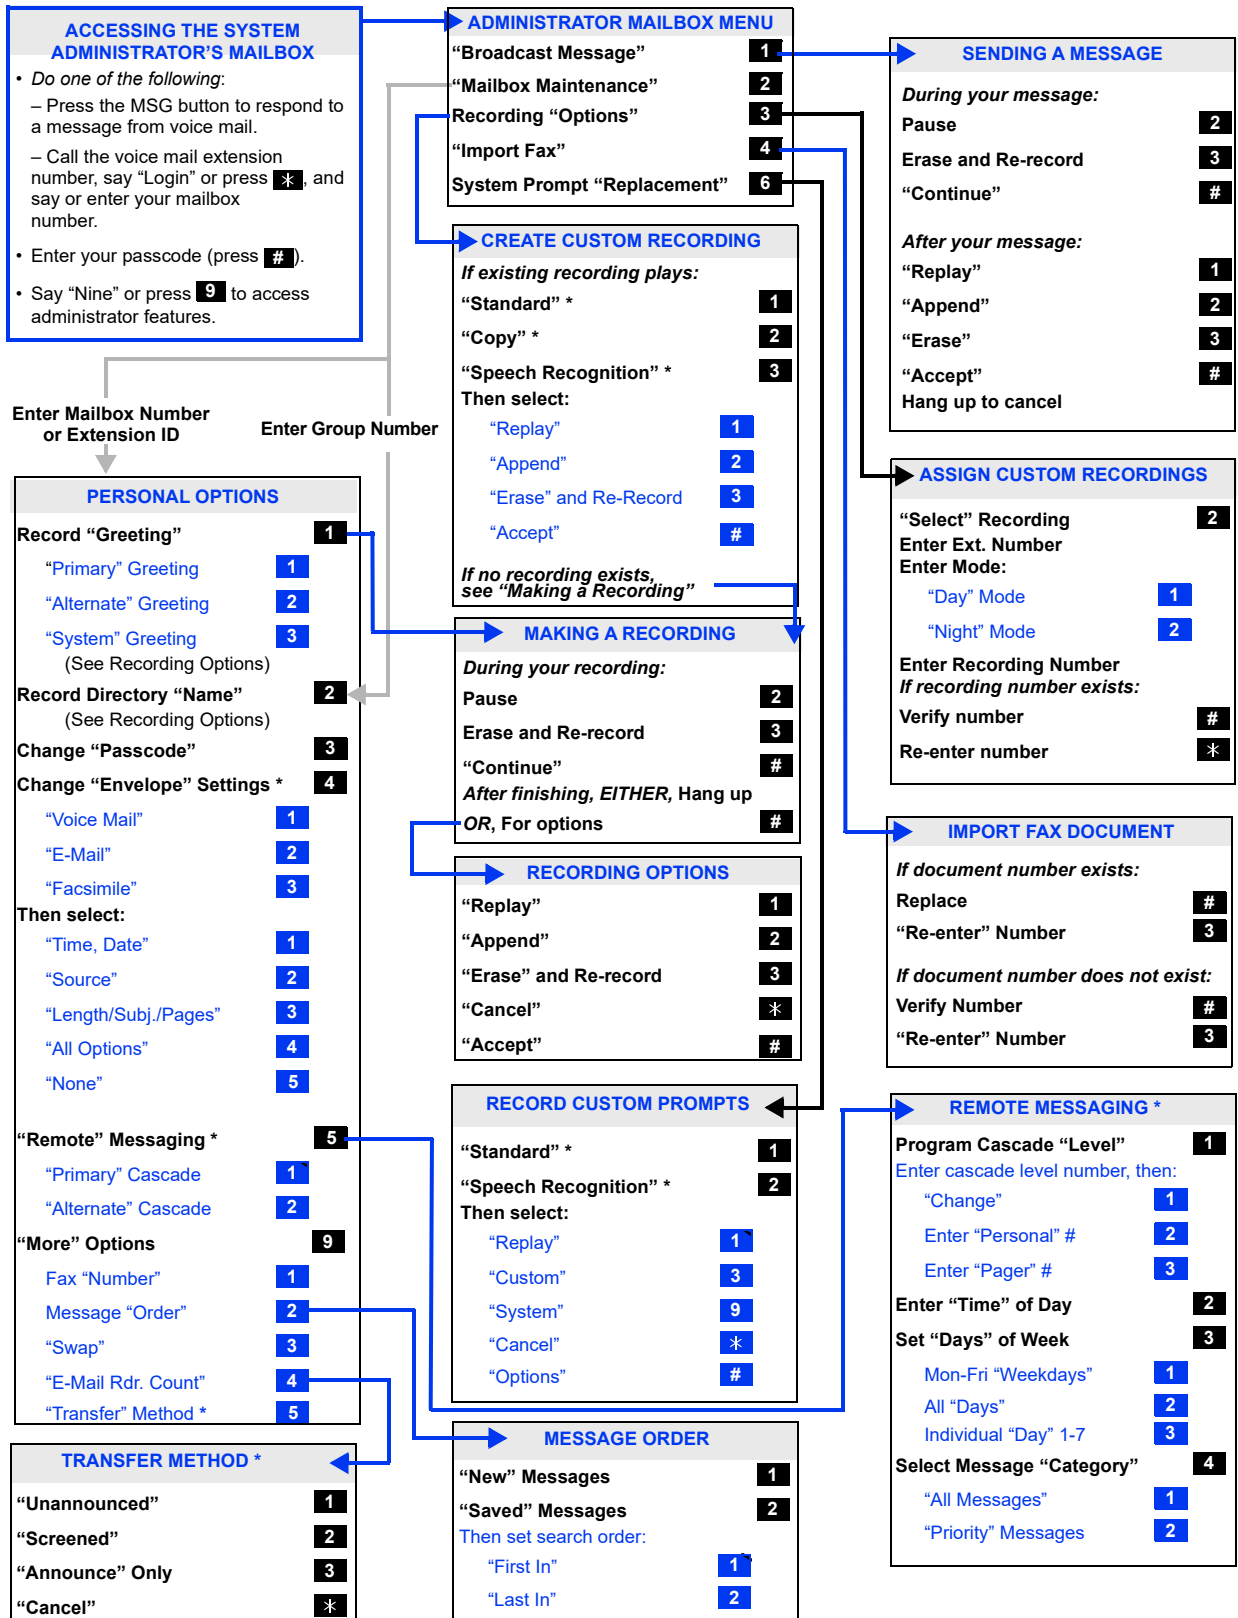

- **Message Notification/Retrieval:** When phone users respond to message indications, they call the MNR application and are prompted for their passcode.

System users and external callers access voice mail by:

- Dialing the phone number or extension number assigned to the Voice Mail application.
- Being transferred to Voice Mail by Automated Attendant.
- Being forwarded to Voice Mail when a called phone is unavailable (using the Call Forwarding or System Forwarding features).
- Responding to Message Waiting indications.

Administrator Account Voice Mail Flowchart

At any menu level, press * or say "Cancel" to cancel or return to the previous menu or press # or say "Accept" to accept. Also, ASR commands are indicated in the quotation marks.

Administrator Mailbox

A system administrator's mailbox is defined to allow recording custom Audiotex recordings for voice processor applications created in Applications Programming, broadcasting messages to all subscribers, and performing Mailbox and Group List maintenance.

The administrator mailbox must be activated in Database (DB) Programming before it can be initialized. If applicable, contact your system administrator for assistance.

Note: To provide system security, each mailbox and extension ID should have a passcode. To make passcodes difficult to guess, they should not match the mailbox number or consist of one digit repeated several times. This is especially important for the administrator mailbox, which allows programming access to other mailboxes.

Initializing the Administrator Mailbox

You must initialize the administrator mailbox before you can use it.

To initialize the administrator mailbox:

1. Dial the voice mail access number.
2. Press * or say "Login" to identify yourself as a subscriber.
3. Say or type the administrator's mailbox number.
4. Type your default passcode (your mailbox number), and then press #.
5. Do one of the following:
 - If you want a passcode, enter a new passcode using digits **0** to **9** (up to 12 digits), and then press #. The system plays back your passcode.
 - If you do not want to use a passcode, press #.
6. Press # or say "Accept" to accept the entry, or press **3** or say "Erase" to erase and re-enter your passcode. The system prompts you to record your directory name.
7. After the tone, record your first and last names.
8. When prompted, do one of the following:
 - Press # or say "Accept" again to accept the name.
 - Press **1** or say "Replay" to replay the name you just recorded.
 - Press **2** or say "Append" or press **2** to add to your name.
 - Press **3** or say "Re-record" to erase and re-record your name.

Accessing the Administrator Mailbox

You can access the administrator mailbox from any extension or external phone.

To access the administrator mailbox:

1. Dial the voice mail access number.
2. Press * or say "Login" to identify yourself as a subscriber.
3. Type or say the administrator mailbox number.
4. Type the passcode, and then press #.
5. Press **9** or say "Nine" to access the administrator menu. (The system does not prompt you to enter or say "**9**.")

Subscriber Account Maintenance

You can perform mailbox maintenance for other system subscribers. For feature descriptions and instructions, refer to the appropriate voice mail user guide. For example, for the subscriber features for this guide, refer to the *Unified Voice Messaging and Embedded Voice Mail Card User Guide*, part number 835.3205. You can also use the “Administrator Account Voice Mail Flowchart” on page 26 as a guide.

Note: For NuPoint UM, go to the [Mitel Online Web site](http://www.edocs.mitel.com) (<http://www.edocs.mitel.com>) for details and documentation about administrator and subscriber features.

Making Feature Changes for Other Subscribers

You can use the administrator account to log on to other subscribers' accounts and make feature changes (if the features are enabled for the subscriber). For example, you can assign a new passcode to the account (see “Changing Subscriber Mailbox Passcodes” on page 31).

Note: While you can use the administrator account to make changes to other subscribers' features, the changes are not permanent. Subscribers can still access their own accounts and override your changes.

In addition to changing the passcode, you can also make the following changes:

- Initializing a mailbox
- Recording personal greetings
- Recording a directory name
- Changing a message envelope
- Programming remote messaging
- Changing the call screening transfer method
- Programming a fax destination
- Changing the message search order
- Disabling and enabling ASR (if ASR is enabled on the system)
- Accessing voice mail messages
- Recording and sending voice messages
- Canceling unheard voice messages
- Recovering deleted messages
- Accessing e-mail, and fax messages (if E-Mail Reader is enabled on the system)
- Setting up an e-mail passcode (if E-Mail Reader is enabled on the system)

Accessing Other Subscriber Accounts

To make changes, you must first log on to the account.

To log on to another subscriber's account:

1. Access the administrator mailbox. See page 29 for instructions.
2. Press **2** or say "Mailbox Maintenance" to access the Mailbox/Group List Maintenance option.
3. Type or say the subscriber's mailbox extension or extension ID.
4. Follow the menu options to complete the changes. See the "Administrator Account Voice Mail Flowchart" on page 26.

Changing Subscriber Mailbox Passcodes

Passcodes prevent unauthorized mailbox access. Subscribers create their own passcodes when they initialize their mailboxes, but you may find that you need to change a passcode to access a subscriber's mailbox.

Notes:

1. Using the administrator account, you do not need to know the passcode of a particular mailbox to perform maintenance.
2. To provide system security, every mailbox and extension ID should have a passcode. To make the passcodes difficult to guess, they should not match the mailbox number or consist of one digit repeated several times. This is especially important for the voice mail administrator's mailbox, which allows programming access to other mailboxes.

To change another subscriber's passcode:

1. Access the administrator mailbox. See page 29 for instructions.
2. Press **2** or say "Mailbox Maintenance" to access the Mailbox/Group List Maintenance menu.
3. Say or enter the mailbox or extension ID. You hear the Personal Options menu.
4. Press **3** or say "Passcode".
5. Do one of the following:
 - If you want a passcode, enter a new passcode using digits **0** to **9** (up to 12 digits), and then press **#**. Voice mail plays back the passcode.
 - If you do not want to use a passcode, press **#**. Voice mail announces that you have chosen not to have a passcode.
6. Press **#** or say "Accept" to accept the passcode as entered, or press **3** or say "Re-enter" to erase and re-enter the passcode.

System Recordings

The following sections describe administrator recording options.

Recording a Broadcast Message

You can make a single recorded message and send it to all Standard and Receive-Only mailboxes. Extension IDs do not receive Broadcast Messages. If applicable, contact your system administrator for more information about Standard and Receive-Only mailboxes and Extension IDs.

To record and send a broadcast message:

1. Access the administrator mailbox. See page 29 for instructions.
2. Press **1** or say "Broadcast Message" to select broadcast message.
3. Record the message.
 - If you exceed the maximum allotted time for message length, you are prompted to re-record the message or send it.
 - If voice mail is full, you hear a message saying that the system cannot accept your message. Hang up and try again later.
4. When you have completed the message, press **#** for the following options:
 - Press **1** or say "Replay" to replay the message.
 - Press **2** or say "Append" to add to the message.
 - Press **3** or say "Erase" to erase and re-record the message.
 - Press **#** or say "Accept" to accept the message. You must use the Accept option for the message to be sent. If you hang up, the message is canceled.

Recording a Group List Name

A Group List is a group of mailboxes programmed in DB Programming by the system administrator. Subscribers can use Group Lists to send messages to several mailboxes simultaneously. You can record names for system Group Lists. Group List names are used for verification purposes only.

Before recording the Group List name, you must know the Group List number. If applicable, contact your system administrator for the Group List number.

To record a group list name:

1. Access the administrator mailbox. See page 29 for instructions.
2. Press **2** or say "Mailbox Maintenance" to access the Mailbox/Group List Maintenance option.
3. Say or type the Group List number. If applicable, the current name is played.

4. After the tone, record the name for the selected list, and then press **#**. You have the following options:
 - Press **#** or say “Accept” to accept the name.
 - Press **1** or say “Replay” to replay the name you just recorded.
 - Press **3** or say “Erase” to erase and re-record the name.

Recording Custom System Voice Mail Prompts

Voice mail prompts are prerecorded options and instructions. Prompts can be used for applications and mailboxes, with or without ASR. See “Automatic Speech Recognition (ASR)” on page 24 for more information about ASR. For consistency, when you record the non-ASR version of a prompt, you should also record the ASR version, if one exists.

You can change most of the default prompts. See page 47 for the default list of prerecorded prompts. If a prompt cannot be replaced, you are notified by the system.

If the Multilingual feature is enabled, you can change either the primary or secondary language prompts. To change primary language prompts, the phone must be in the primary language mode; to change secondary language prompts, the phone must be in the secondary language mode. If you change the text of the prompts, keep the content similar to the default text to avoid user confusion.

To record custom system prompts (or restore system prompts):

1. Access the administrator mailbox. See page 29 for instructions.
2. Press **6** or say “Replacement” to select the System Prompt Replacement menu.
3. Say or enter the prompt number. See page 47 for prompt numbers and descriptions.
 - If the number is not valid, you hear an error message and must choose another prompt number.
 - If the prompt is available in standard format only, go to the next step.
4. If the prompt is available in ASR and non-ASR formats, select one of the following:
 - Press **1** or say “Standard” to record a standard (non-ASR) prompt.
 - Press **2** or say “Speech Recognition” to record an ASR prompt.
5. The current prompt is played. You have the following options:
 - Press **1** or say “Replay” to replay the prompt.
 - Press **3** or say “Replace” to replace the system prompt with a custom prompt. Record the prompt, and then press **#**.
 - Press **9** or say “System” to reinstate the system prompt.
 - Press ***** or say “Cancel” to leave the prompt unchanged.
6. If the voice processing system PC disk is full, a prompt notifies you that it cannot accept the recording. Hang up and try again later.
7. If the new prompt will be available in ASR and non-ASR formats, repeat [step 5](#) to record the other format.

8. When you have finished recording, you have the following options:
 - Press **1** or say “Replay” to replay the recording.
 - Press **2** or say “Append” to add to the message.
 - Press **3** or say “Erase” and re-record the message.
 - Press **#** or say “Accept” to accept the message you recorded.
9. Repeat steps **3** through **8** for additional prompts, or hang up to end the recording session.

Creating Audiotex Recordings

Audiotex is a feature that allows callers to select pre-recorded menu options. You can create up to 500 custom audiotex recordings that you can use for company greetings, Auto Attendant greetings, Call Routing Announcements (CRAs), and hunt group applications. You can also assign audiotex recordings to day and night modes of operation. See [“Audiotex Recording Tips”](#) below for tips when creating recordings. You can also use the audiotex recording planning sheet on page 46 to help you plan your custom greetings.

For consistency, when you record the non-ASR version of a prompt, you should also record the ASR version, if one exists. By default, recording 001 is the default system voice mail main greeting, and recording 002 is the Automated Attendant main greeting. You can change the default system recordings. To restore the system recordings, you can return the voice processing system database to the defaults.

Recordings for fax documents should include all dialing instructions. The recording should state whether documents can be selected by number, and list all options. If fax delivery times are set to specific days or times, the recording should also include this information.

Audiotex Recording Tips

Use the following tips for designing an effective Call Routing Announcement application:

- Design with the caller in mind, not just the information you want to include.
- Keep menus as simple as possible, with four or fewer options per menu.
- Number options sequentially and do not skip numbers. List “transfer to operator” last.
- Use consistent digits for options, such as 1 for Yes, 2 for No, and 0 for the operator.
- State the option before the digit. For example, say, “For account information, press 1,” instead of “Press 1 for account information”.
- Draw a map of your arrangement to avoid creating “dead ends” or endless loops.
- Take advantage of Caller ID and DNIS to route calls to suitable menus.
- Keep recordings short (under 60 seconds) and do not use jargon.
- Give the most frequently requested information in the first ten seconds, without requiring the caller to press a digit.
- Make sure the recordings are clear and the voice is consistent from prompt to prompt. Avoid heavy regional accents.

- Do not repeat the main greeting on any other level.
- Make seasonal changes when necessary, but keep menu options the same. (Callers get used to them.)
- Include an option for overriding the primary language. For example, say, “For English, press 1. Para Español, empuje 2”.
- Test your application after every change. Listen to your prompts periodically.

Creating Custom Audiotex Recordings

See “Audiotex Recording Tips” on page 34 for tips to consider when creating recordings.

To create a custom audiotex recording:

1. Access the administrator mailbox. See page 29 for instructions.
2. Press **3** or say “Options” for recording options.
3. Press **1** or say “Custom” to make a recording.
4. When prompted, say or type the recording number (001–500).
5. If no recording exists, go to the next step.

If a standard (non-ASR) recording already exists, it is played. You then have the following options:

- Press **1** or say “Standard” to record a standard (non-ASR) greeting.
 - Press **2** or say “Copy” to copy the standard (non-ASR) greeting.
 - Press **3** or say “Speech Recognition” to record an ASR greeting.
6. When prompted, record the greeting or message, and then press **#**. While you are recording, you can:
 - Press **2** to pause while recording. (Press **#** or say “Continue” to continue.)
 - Press **3** to erase and re-record your message.
 7. If you exceed the maximum allotted time for recording length, you are notified and allowed to re-record or save the recording.
 8. If the voice processing system computer disk is full, a prompt notifies you that it cannot accept the recording. Hang up and try again later.
 9. When finished recording, select one of the following options:
 - Press **1** or say “Replay” to replay the message.
 - Press **2** or say “Append” to add to the message.
 - Press **3** or say “Erase” to erase and re-record the message.
 - Press **#** or say “Accept” or to accept.
 10. To create an ASR recording, choose one of the following options:
 - Press **1** or say “Copy” to copy the standard (non-ASR) greeting.
 - Press **3** or say “Speech Recognition” to record an ASR greeting.

11. When finished, select one of the following options:

- Press **1** or say “Replay” to replay the message.
- Press **2** or say “Append” to add to the message.
- Press **3** or say “Erase” to erase and re-record the message.
- Press **#** or say “Accept” to accept the recording.

Assigning Audiotex Recordings to System Extension Numbers

You can assign audiotex recordings to system extension numbers. For example, if users dial extension 2000 to reach voice mail, you can assign new audiotex recordings to extension 2000 to change the recordings that users hear when they connect to the voice mail system.

If you assign a recording to an application with a list of several recordings, you can change only the first entry in the list. You must use DB Programming to change a list of recordings. Contact your system administrator for more information.

To assign custom audiotex recordings to specific application extension numbers:

1. Access the administrator mailbox. See page 29 for instructions.
2. Press **3** or say “Options” for recording options.
3. Press **2** or say “Select” to select a recording.
4. When prompted, say or enter the extension number of the application you want to program. (For example, if users dial 2000 to reach voice mail, enter **2000** to assign the voice mail greeting.)
5. Do one of the following to select the mode for the recording:
 - Press **1** or say “Day” for day mode.
 - Press **2** or say “Night” for night mode.
6. Type or say the recording number (001–500). If a recording already exists, it is played. You have the following options:
 - Press **#** or say “Yes” to accept the recording.
 - Press ***** or say “No” to go back to [step 4](#).

If no recording exists, the system informs you that there is currently no recording, but assigns the recording number to the application.

From release 6.2, you can now import audio files and use them for Audiotex applications, including Auto Attendant (AA) and Call Routing Announcement (CRA) features. This will improve the quality and fidelity of the recordings and allow pre-recorded, professional recordings for auto attendant greetings and announcements.

Recording requirements are as follows:

- At this time, only WAV files are supported.
- Recordings must be less than 5 minutes in length.

Importing a wav Audio File

To import a wav audio file:

1. Within the Audiotex Recordings folder, right-click on a recording number. Select the import wav audio file option.
2. Click Browse to locate the audio file.
3. Select the checkbox to enter the recording description into description textbox.

Note: By default, the checkbox is selected and default description is file name. If the check box is cleared, the system uses initial value (for example, Recording XXX) as description.

4. Click **Convert and Upload** to upload the file in .wav format.

Removing a wav Audio File

To remove a wav audio file:

1. Within the Audiotex Recordings folder, right-click on a recording number.
2. Select the Remove wav audio file option. The remove wav audio file dialog box appears.
3. Click **Ok**.

Note: If a wav audio file is removed, all settings are restored to default values and the uploaded file is deleted.

Fax Import Feature

If your voice mail system has fax enabled, you can use your voice mail administrator's mailbox to import fax documents. Imported documents can then be requested by callers who use a Call Routing Announcement (CRA) application programmed to provide the Fax-On-Demand service.

Note: You should re-record system prompt number 672 (see "Default ASR and Non-ASR Voice Prompts" on page 47) to let callers requesting faxes know what the valid time window is for fax requests, and when they should expect the fax to be delivered if their request falls outside of the valid time window.

To import a fax document:

1. Using a fax machine, after you obtain dial tone, dial the voice mail access number.
2. Access the administrator mailbox. See page 29 for instructions.
3. Press **4** or say "Import fax" to select the Import Fax option. (If the system does not have a fax license, this option is not accepted.) The system may prompt you with one of the following messages. If not, continue to [step 4](#).
 - **All system fax ports are busy:** Hang up and try again later.
 - **The system already contains the maximum number of fax documents allowed:** Until one or more fax documents are deleted from the system, there is no space for additional documents.
 - **The system does not have enough disk space to import any more documents:** Until one or more fax documents are deleted from the system, there is no space for additional documents.
 - **The system currently is at or above the Maximum Fax Library Size:** Until one or more fax documents are deleted from the system, there is no space for additional documents. By default, the Maximum Fax Library Size field is set to 0 in DB Programming. Contact your system administrator for more information.
4. When prompted, say or enter the fax document number. One of the following occurs after you enter the number:
 - If the document number does not already exist, the system asks you to verify the number. Press **#** or say "Yes" if the number is correct, or press **3** or say "Re-Enter" to re-enter the number.
 - If the document number already exists, the system asks if you want to replace it. Press **#** or say "Yes" to replace the document and go to the next step, or press **3** or say "Re-enter" to re-enter the number.
 - If you did not enter a valid number, you are prompted to enter a new number.
5. When prompted, press the **Start** button on the fax machine. One of the following may occur:
 - If the system cannot communicate with your fax machine, check that it is working properly and say "Continue" or press **#** to try again. Return to [step 4](#).
 - If the system runs out of disk space while importing the document or if the document will cause the system to exceed the Maximum Fax Library Size, you cannot import this

document until one or more fax documents have been deleted from the system to create disk space. Press # or say "Cancel" to return to [step 4](#).

6. When the fax transmission is complete, the system tells you that the document was received. Press # or say "Continue" to continue importing documents or hang up to exit.

Alarms

Alarms are generated on phones as the result of continuous self-diagnostics run within the system. They are a basic indicator that there is a problem or potential problem with the system. The severity and type of alarm determines the corrective action necessary to resolve the problem.

To allow you to monitor multiple nodes, the system provides system alarms, which include voice processing alarms, and network-wide alarms. See Table 1 on [page 41](#) for the complete list of voice processing alarms.

Voice Processing Alarms

On the MiVoice Office 250, the following voice processing alarms are generated:

- **Minor Voice Processing alarms** (020–039): These minor alarms indicate voice processing problems that you may be able to address without calling service personnel, or that do not necessarily require immediate attention.
- Even when a voice processing alarm has been registered, the system may still function correctly.
- **Major Voice Processing alarms** (200–224): These alarms indicate voice processing problems that require calling service personnel.

The system Alarm Reporting feature detects equipment failures. If there is a system failure that affects service, a major alarm appears at all affected phones. When a minor equipment failure occurs, a minor alarm is generated and appears on the primary attendant's display and, if enabled, at your administrator phone. When a Voice Mail alarm is in effect, the telephone system may be functioning properly, but the voice processing system may be inoperative.

Responding to Alarms

A major alarm requires you to contact service personnel, while a minor alarm may or may not require you to contact service personnel in addition to clearing the alarm.

To respond to a major alarm:

1. An equipment failure has occurred. Contact service personnel for the major voice processing alarms #200-224.

To respond to a minor alarm:

1. When a minor alarm indication appears, write down the alarm information.
2. While on-hook, clear the alarm as described in “Clearing Alarms” on page 41. The message SYSTEM (or NETWORK) ALARM CLEARED appears.
3. Take the appropriate action as indicated in Table 1 on [page 41](#).

Clearing Alarms

You can clear a network-wide alarm on the local node only or on every node in the network. To clear an alarm, you can use the administrator feature codes or the menu buttons.

To use the feature codes to clear alarms:

1. Dial one of the following feature codes to clear the alarm:
 - **Clear Network Alarm (9851):** This feature code clears network-wide alarms on every node in the network. The **Clear Network Alarm** feature code may be entered on any node in the network, but the **Send Network Alarms** flag must be set for you to clear alarms on other nodes in the network. **Clear Network Alarm** does not affect system alarms.
After you enter the feature code, NETWORK ALARM CLEARED appears, and the highest priority alarm is cleared.
 - **Clear System Alarm (9850):** This feature code clears all local and network-wide system alarm displays on your node.
After you enter the feature code, SYSTEM ALARM CLEARED appears, and the highest priority alarm is cleared.
2. If applicable, enter the feature code again to clear the next alarm in the queue. Only one alarm is cleared at a time.

To use menu buttons to clear alarms:

1. Do one of the following:
 - Press the **CLEAR ALL ALARMS** menu button to clear all alarms. ALL ALARMS CLEARED appears, and the display returns to the idle menu.
 - Press the **CLEAR ALARM** menu button to clear the currently displayed alarm.
2. If the currently displayed alarm is a system alarm, SYSTEM ALARM CLEARED appears, and the display shows the next highest priority alarm, if there is another alarm.
3. If the currently displayed alarm is a network alarm, NETWORK ALARM CLEARED appears, and the display shows the next highest priority alarm, if there is another alarm.

If there are no more alarms, the display returns to the idle menu.

Table 1: Voice Processing Alarms

Alarm Text	Description and Action Required
SYS ALARM #20 CHECK PRINTER	The printer is not functioning properly. Check that the cable and the power cord are connected, and that there is paper and toner.
SYS ALARM #21 V-MAIL 80% FULL	The external voice mail disk space is 80 percent full. If it reaches 100 percent, Voice Mail cannot accept any messages until disk space is made available. Contact service personnel.
SYS ALARM #22 V-MAIL 100% FULL	100 percent of the external voice mail disk space is in use. Voice mail cannot accept any messages until disk space is made available. Contact service personnel.

Table 1: Voice Processing Alarms

Alarm Text	Description and Action Required
SYS ALARM #23 SMDR 80% FULL	The SMDR disk space on the external voice processing system is 80 percent full. If it reaches 100 percent before the SMDR information is cleared, no further SMDR recording will be possible. Contact service personnel.
SYS ALARM #24 SMDR 100% FULL	100 percent of the SMDR disk space on the external voice processing system is in use. No further SMDR recording is possible. Contact service personnel.
SYS ALARM #32 INSUF BAND	The IP Network does not have enough bandwidth to support the IP call that is currently connected to the extension. If this alarm is generated frequently, it could indicate a network problem that requires the attention of your network administrator.

APPENDIX A

REFERENCE

Troubleshooting Tips

The following sections include information to help you troubleshoot problems.

System Administrator and Provider Information

Because this guide covers voice mail administration features only, you may find that you need additional assistance from your system administrator for issues such as creating new user accounts or changing system settings.

Your system administrator may be on site or you may rely on your local provider (the company that installed your phone system and now services it) for system administration. All sales, service, and technical support are handled at the local level by your authorized Mitel provider. If you do not know the contact information for your local provider, use the “Partners – Mitel Partner Locator” link at the top of the [Mitel Web site](http://www.mitel.com) (www.mitel.com) to locate your nearest office.

Administrator Troubleshooting Tips

[Table 1](#) includes voice mail administrator troubleshooting tips.

Table 1: Administrator Troubleshooting Tips

Problem	Possible Solution
I do not know the administrator mailbox number or passcode.	You must contact your system administrator for the mailbox number and passcode. For more information, contact your system administrator or local authorized provider. See “System Administrator and Provider Information” above.
One of our employees has left the company, and I need to change the mailbox passcode and delete messages and change settings.	See “Accessing Other Subscriber Accounts” on page 31.
I cannot set up a new voice mail subscriber mailbox.	Your system administrator must create the new account. For more information, contact your system administrator or local authorized provider. See “System Administrator and Provider Information” above.
I need to change the voice mail system time.	Your system administrator must change the voice mail system time. For more information, contact your system administrator or local authorized provider. See “System Administrator and Provider Information” above.
I need new voice mail system greetings for day and night mode, vacations, and so on.	You can record new audiotex recordings for each greeting that you want to use. See “Creating Audiotex Recordings” on page 34.
I have recorded new audiotex recordings, but I do not know how to assign them to our voice mail application.	See “Assigning Audiotex Recordings to System Extension Numbers” on page 36.

Table 1: Administrator Troubleshooting Tips (continued)

Problem	Possible Solution
I have several voice messages in my inbox. Is there a way to delete all of the messages at once?	You must delete voice messages one at a time.
Can I set the number of rings before calls go to voice mail?	Your system administrator must program this feature. For more information, contact your system administrator or local authorized provider. See "System Administrator and Provider Information" on page 44.

Custom Audiotex Recordings Programming Planning Sheet

If you customize audiotex recordings, you can use [Table 2](#) to record the text. For further instructions, see “Creating Custom Audiotex Recordings” on page 35.

Table 2: Audiotex Recordings

Recording #	Text	Where Used (Ext. #)
Example:	Thank you for calling XYZ Company. All of our representatives are busy right now. Please hold for the first available representative.	Ext.2011 (Hunt Group Overflow Station)

Default ASR and Non-ASR Voice Prompts

Table 3 shows all of the U.S. English default system voice prompts for ASR and non-ASR-enabled systems. Prompts marked with an asterisk (*) cannot be re-recorded.

Table 3: Voice Prompts: Non-ASR and ASR

Prompt ID	Content (Non-ASR)	Content (ASR)
001	To leave a message, please enter a mailbox number.	To leave a message, please say or enter a mailbox number.
002	For the directory, press pound (hash).	For the directory, say "Directory" or press pound (hash).
003	To reach an operator, press zero.	To reach an operator, say "Operator" or press zero.
004	I'm sorry...	N/A
005	...is not available.	N/A
006	The number entered is not valid.	N/A
007	Using the keys on your telephone, please spell the name of the person, then press pound (hash). For the letter Q, press seven. For the letter Z, press nine. To advance to the next character, please wait for two seconds or press another key. To exit the directory, press star.	Please say the name of the person you are trying to reach. Otherwise, using the keys on your telephone, please spell the last name of the person, then press pound (hash). For the letter Q, press seven. For the letter Z, press nine. To advance to the next character, please wait for two seconds or press another key. To exit the directory, press star.
008	To exit the directory, press star.	To exit the directory, say "Cancel" or press star.
009	Mailbox number...	N/A
010	If this is correct, press pound (hash).	If this is correct, say "Yes" or press pound (hash).
011	For the previous name in the directory, press one.	For the previous name, say "Previous" or press one.
012	To hear additional information, press two.	To hear additional information, say "More" or press two.
013	To hear the next directory name, press three.	To hear the next name, say "Next" or press three
014	To spell a new name, press four.	To spell a new name, say "New" or press four.
015	Extension number...	N/A
016	Not used	Not used
017	...is not a valid choice.	N/A
018	Please try again.	N/A

Table 3: Voice Prompts: Non-ASR and ASR (continued)

Prompt ID	Content (Non-ASR)	Content (ASR)
019	After the tone, please record your message. When finished, you may hang up to deliver the message or press pound (hash) for more options.	N/A
020	Message delivered.	N/A
